

Ficha Técnica

Thinner for water-based paints and enamels

Thinner for water-based paints and enamels

Versión: 31/10/2023

Ventajas

- Does not provide Lime
- It is more effective with less quantity
- Creates less foam or bubbles
- Generates less splash than water

Descripción

Thinner for water-based paints and enamels that avoids contamination and degradation problems generated by running water

Propiedades

Water as a diluent creates problems in water-based paints, enamels and varnishes, such as lime in some areas, chlorine, fluoride, residues, etc. in addition to needing a larger amount, thus denaturing the paint. The Water Diluent is 30% more effective than water, and contains specific additives to control foam, splashing and the pH of the products.

Certificados de empresa

Datos técnicos

Datos de identificación del producto

Color	Colorless
Aspecto	Liquid
Naturaleza	Water-based dispersion

Dónde aplicarlo

Use it as a substitute for tap water in products that require it, taking into account that it is 30% more effective than water

Precauciones

Shake vigorously before use

Modo de empleo

Important: Shake the bottle vigorously before adding it.

Add a small amount of diluent and stir, taking into account that it is 30% more effective than tap water.

Repeat the process until you achieve the desired consistency.

Almacenamiento

In a cool, dry place, away from extreme temperatures.

Formatos

Containers: 500 ml bottles sold in display boxes of 12 Units.
